User Scenario 1: As a new user, I want to open an account with the Planetarium so I can save my celestial findings

Overall Score: 3

The Create an Account link is very tiny. I would prefer the link to be a little larger than that, as it is one of only a few elements on the page and an important one. I would want a password verification textbox to ensure that I entered the password I wanted to use. I only get an alert message when an account is created. If it is not created, which information would not be known by an end user, there is no message. I would want to see rules for username and password so I know what I can use in my username and password. Except for those issues, the registration feature is pretty intuitive.

User Scenario 2: As a user I want to securely access my account so I can interact with the Planetarium in a secure environment

Overall Score: 5

If I could have an option to be remembered as a user that would be great. And it may be a little better-looking screen.

User Scenario 3: As a user I want to see my planets and moons added to the Planetarium so I can track my findings

Overall Score: 3

It would be better to see the moons at a different table level than the planet, and the owner ID is confusing. Also, file creation with no image, I would want to see a blank space rather than a broken file icon.

User Scenario 4: As a user I want to add new planets and moons to the Planetarium so I can update my findings

Overall Score: 3

The file upload only works with .jpg; for any other file, the file upload does not work, and no message or alert is given leaving the user confused. I would want the input boxes to be aligned in some way so there is continuity in design. Instead of the planet ID to be inserted, I want it to be more intuitive, maybe a dropdown with ID and name together or a search box with suggestion. I would like to see rules for the names and file format allowed so I know what name I can put.

User Scenario 5: As a user I want to remove planets and moons from the Planetarium so I can correct my findings

Overall Score: 4

This feature is pretty intuitive and easy to use. I would want to see this feature and create a celestial body feature that is separated or maybe have a delete button on the table next to the celestial bodies.
